

redefining sitting comfort

EXGEL[®]

redefining sitting comfort

EXGEL®

What is EXGEL®?

Background

EXGEL was developed as ultimately soft and stable material to reduce the risk of decubitus ulcer. KAJI CORPORATION has been utilizing EXGEL for various products by combining excellent characteristics of EXGEL and own products' development ability and manufacturing technology.

Characteristics

EXGEL's flexibility is extremely high; it stretches about 20 times and able to restore to its original form. Its soft and slow recovery natures are gentle to human's skin, and realize ideal skin contact possible. EXGEL also has an excellent shock absorbability, and proved more than 10 times high shock absorbability than general urethane foam in tests.

Comments from professional

Sitting in the same position for a long time can cause pressure and shear forces that obstruct blood flow, and it can increase the risk of decubitus ulcers.

The pressure under the tissue is considered to be 3-5 times higher than that of skin surface, and skin tissues can be damaged once shear forces applied.

Gel material can buffer shear forces and redistribute the pressure, and is suitable for seating supports.

Therefore, the gel is considered to be effective for preventing decubitus ulcers, as well as comfortable seating.

(Professor Makiko Tanaka, Yamaguchi Prefectural University. Japanese Society of Pressure Ulcers)

Benefit of EXGEL[®] cushions

Multilayer of EXGEL and foam

Multilayered foams of different density and EXGEL provide not only pressure redistribution but also stable and comfortable seating while keeping the cushion weight light.

Pressure redistribution and skin protection

When the body weight is applied, EXGEL changes its shape in every direction and conforms to the body shape maximizing the contact surface so the pressure is supported by wider area and evenly redistributed.

EXGEL also moves along with client's body movement. It buffers shearing forces and reduces the risks of skin break down.

Easy to use and maintain

EXGEL goes back to the original shape once the load is removed, which means re-adjustment of gel is not required. EXGEL does not bottom out nor puncture. Cover is water resistant and machine washable.

Surface material of the cushion body can be easily wiped off or disinfected by spraying disinfectant. Just place the cushion on wheelchair and it is ready to use. Very simple and user friendly for both wheelchair users and care-providers.

Cushion covers

Incontinence cover:

The original cover which comes with the cushion order. High stretch and machine washable. Thin urethane foam used as a layer prevents heat built-up and helps to keep the surface dry.

Film lamination layer protects cushion from fluid.

Breathable cover:

Available as an optional cover.

High stretch and machine washable mesh cover. Thin urethane foam used as a layer prevents heat built-up and helps to keep the surface dry.

Both covers' outer fabric passed Cytotoxicity test, ISO 10993-5, and meets flammability requirement for California Bulletin 117.

High quality

All of EXGEL cushions and covers are manufactured in Japan with the finest materials under quality management standard of ISO9001.

Wide range of cushions

Total of 10 different types of cushions meet variety of requirements of wheelchair users and people with restricted mobility.

EXGEL® Standard Cushion

EXGEL cushion's standard model, winning the long time popularity as a wheelchair cushion.
 EXGEL used in entire surface redistributes the body pressure effectively.
 EXGEL also buffers shearing forces between the body and cushions.

Product Features

Cover

Incontinence cover: fluid resistant laminated layer protects cushion from moisture.
 Breathable cover: breathable mesh fabric dissipates moisture.
 Machine washable.
 The outer fabric passed Cytotoxicity test, ISO 10993-5, and meets flammability requirements for CA Bulletin 117.

Structure

Synthetic leather on the surface of body can be disinfected with ethanol.

EXGEL excellently redistributes the body pressure.

Multilayered high density urethane foam provides proper immersion, and supports stable sitting posture.

Standard Cushion High

Adopted a strong skidproof in base of body and cover.

Recommendations

For wheelchair users who need superior pressure redistribution.
 The High is recommended for the client who needs further pressure redistribution.
 The Anti-Thrust is recommended for the client needing forward/rearward stability.

Lineup

Regular

Easy to use flat style.
 3.5cm thickness.

High

Added more immersion and stability.
 6.5cm thickness.

Anti Thrust

Prevents unwanted forward move of ischium.
 Front: 8.5cm, Rear: 7cm thickness.
